BIBLIOGRAPHY OF BIOETHICS

VOLUME 27 (2001)
LeRoy Walters and Tamar Joy Kahn, editors

The Bibliography of Bioethics is more useful than ever. Citations from the former BIOETHICSLINE® are being redirected to the much larger PubMed and LOCATORplus databases, and at present the citations are dispersed. In this single publication you have access to 4,009 new references to ethical, legal, and public policy issues in health care and biomedical research. Topics include stem cell research, assisted suicide, gene therapy, organ donation, human experimentation, and resource allocation. References are to books, journal and newspaper articles, legal documents, and government reports. For the first time, the most recent annual cumulation (2000) of New Titles in Bioethics is incorporated as the monograph subject entry section of the Bibliography, providing citations to foreign-language books and reports in addition to those in English.

688 p. Hardbound $70 North America; $80 elsewhere
