

Free BIOETHICSLINE® on the National Library of Medicine's Internet Grateful Med

Visit:

<http://bioethics.georgetown.edu/>
for a complete Searcher's Guide,
the Bioethics Thesaurus, and more!

Because you are attending this session we think you might like to have more information on BIOETHICSLINE®, a bibliographic database produced at the Kennedy Institute of Ethics, Georgetown University, under contract with the National Library of Medicine.

Why search BIOETHICSLINE®? Everything in the database pertains to ethical, legal, or public policy issues in health care or biomedical and behavioral research. You've heard the slogan "Size counts." Here we think it does; our database of roughly 60,000 cites is highly relevant. We have, in effect, collected, analyzed, and filtered the literature of many disciplines for you.

To access more readings on the topics of the APHA 1998 special interest sessions listed on the back, go to the National Reference Center for Bioethics Literature home page shown above:

select: Free BIOETHICSLINE®

select: BIOETHICSLINE®

enter the search strategies shown on the reverse in the Enter Query Terms box.

You will retrieve representative citations to literature related to the topics of the session.

This set of sample searches was performed on November 7, 1998. The numbers of items retrieved are based on the database at that time. BIOETHICSLINE® is updated bimonthly with approximately 600 additional citations.

The staff of the National Reference Center for Bioethics Literature, also at Georgetown, will do bibliographic searches for you at no cost. Please refer requests for custom searches, search strategy assistance, and bioethics questions to:
