In the Matter of:  

Application of the District of Columbia  
Water and Sewer Authority for a Raze  
Permit for Construction of the First Street  
Tunnel at the McMillian Slow Sand Filtration  
Plant, which is the part of the McMillan Park  
Reservoir Historic District  

ORDER

The application of the District of Columbia Water and Sewer Authority to demolish two filtration cells at McMillan Park Reservoir is **Granted**. Applicants will construct a stormwater and sewer overflow tunnel primarily beneath First Street, NW, a central component of a Mayoral initiative to address flooding from combined sewer overloads in the Bloomingdale and LeDroit Park neighborhoods. In order to accomplish this, it will be necessary to demolish the two sand filtration cells at the southwest corner of the parcel (filter beds 25 and 26) to create a staging and boring area for the construction of a below-grade vertical entrance shaft to the tunnel. The applicant has agreed to pursue the plan for the site identified as Option C, which avoids a curb cut and will restore the topography of the site to its current elevation.

The application plainly qualifies as “necessary to allow for the construction of a project of special merit” under D. C. Code § 6-1107(f). Building the tunnel is necessary to alleviate chronic flooding, a project with public health and safety “benefits having a high priority for community services” within the statutory definition of special merit at D.C. Code § 6-1102(a)(11). This order is being issued in advance of an opinion containing findings of fact and conclusions of law, because this is a time-sensitive public safety project that has not attracted substantial opposition. The opinion will be prepared as soon as the transcript of the hearing becomes available.

April 10, 2013

J. Peter Byrne  
Mayor’s Agent Hearing Officer
